RAIL DRILLS

With range of most common and custom-made positioners and templates our rail drills are able to suit any required rail standards worldwide.

Customers can choose from three supply options. Namely electric motor, petrol motor or battery drive.

All models enable drilling of holes up to 36 mm in diameter, whereas their compact and lightweight design make them ideal solution for site work.

Fast positioning, quick clamping and instant unlocking mechanisms make them easy to use and safe devices.

Pressure Coolant system including 5l bottle enables forced feeding of cooling medium in any drilling positions. It is ideal solution when gravitational feeding fails.

PRO-36R is equipped with an electric motor, PRO-36RH is fitted with a petrol Honda 4-stroke motor and the latest model PRO-36R Battery is a cordless rail drilling machine.

Our diesel and battery powered rail drills are the perfect solution for working outdoors in remote areas where there is no access to mains electricity.

DRILLS FOR SPECIAL APPLICATIONS

PRO-36 PM Battery

This special design battery-operated machine equipped with permanent magnetic base is dedicated to operate in remote areas, where no power supply is available. New permanent magnetic base was designed by Promotech R&D using computer-aided magnetic field analysis together with precise estimation of the magnetic holding force.

The base does not require any electricity to operate. The drill can be used with convex (min diameter – 80 mm) and concave (min diameter 1000 mm) materials.

PRO-36 PM Battery is equipped with LED monitoring system that generates signals in green and red colors to indicate current condition of the drill and give safety information.

LED Monitoring System

PRO-36PM Battery is equipped with LED monitoring system that generates signals in green and red colors to indicate current condition of the drill and give safety information. Please pay particular attention that the permanent magnetic base must first be activated. Otherwise it will not be possible to switch on the motor.

			Emergency stop (overload, clamping loss). <i>Red Flashes</i>
			Motor doesn't turn on. Replace discharged battery. <i>Solid Red</i>
	SAFETY INFORMATION		Motor doesn't turn on. Switch on the base first. <i>Flashing Green</i>

PRO-36 T3

The machine with electromagnetic base is dedicated to operate with steel profiles. Minimum thickness of the wall can be as thin as 3 mm. Unique design allows optimal magnetic field distribution so the holding force is comparable to the regular base placed on material which is twice as thick.

It makes it suitable to work on really thin materials.

PRO-36 AUTO | AUTO FEED MAG DRILL WITH LED MONITORING SYSTEM

New PRO-36 AUTO is equipped with unique LED monitoring system that indicates current condition of the drill and gives additional safety and diagnostic information.

Auto Feed Smart Drive System optimizes parameters for each cutting/milling operation, when drill works in automatic mode.

The drill controller keeps choosing the most effective working conditions based on the correlation of motor load, feed speed and the range of allowable cutting parameters for a given tool type and hole diameter.

It results in extending tool life of both HSS and TCT cutters and enhanced machine performance.

Countersinking and working on thin workpieces, when the LED shows that the clamping force is low (flashing green) are possible in manual mode only.

A safety strap protects the machine from falling in case of a clamping loss.

Features and benefits:

- LED Monitoring System indicates current condition of the drill and gives safety and diagnostic information
- LED Monitoring System flashes green when inadequate adhesion is detected due to e.g. gap or thin workpiece
- Auto Feed Smart Drive optimizes the milling parameters for each tool individually depending on its type (HSS or TCT) and hole diameter from 12 mm up to 36 mm, that significantly extends tool life
- tilt sensor stops the motor in machine breaks away
- dual bars guide system ensures extraordinary stiffness and adjustment free operation
- Magnetic Field Shape Control (MFSC) provides maximum holding power on thin materials
- Auto-feed control stops the machine when cutter goes through
- protection against auto restart after power cut off
- compact, rigid design with ultra-light weight of 13.5 kg

VACUUM PAD FOR MAG DRILLS

Vacuum pad is a special type of clamping device for compact mag drills. It enables magnetic drilling machines to effectively operate on non-ferrous materials, where it is impossible to fit the magnetic base of a drill directly to the workpiece.

The vacuum pad provides the ability to drill on non-magnetic or thin surfaces and materials with certain surface imperfections. It is intended for use with stainless steel, aluminum and thin carbon steel plates.

Depending on the requirements and operating conditions, the pad can be powered by vacuum supply or compressed air supply.

Features & Benefits:

- enables drilling in flat non-ferrous materials
- for use with Promotech mag drill models: PRO-16, PRO-36, PRO-40, PRO-50, PRO-50TCT, PRO-51, PRO-52T, PRO-55 and PRO-55TCT
- includes 2-meter pump connection hose
- 2 possible configurations:
 - vacuum supply (standard)
 - compressed air supply (optional)

METRIC ANNULAR CUTTERS | HSS & TCT

HSS cutters are made of high speed steel with multi-cut geometry for ply-cutting to gain better removal of chips. TCT cutters incorporate selected special-purpose carbide tips with multi-cut geometry for ply-cutting, lower friction and reduced damage of tips. Both types of the cutters Weldon shank with more firm clamping for stable cutting and finish of the holes.

Annular cutters advantages over twist drills:

- save time and money by eliminating costly pilot holes and step drilling
- cut material only at the periphery of the hole, whereas twist drills convert entire hole to chips
- drill holes 3 times faster than twist drills
- drill on curved surfaces such as pipe or tubing
- overlap cuts on existing holes
- produce reamed quality burr-free holes
- reduce machine size and power requirements
- resharpenable cutting edges (HSS)

Most important practical guidelines:

- do not use annular cutters without pilot pins and arbors without ejection spring
- it is not safe or productive to use blunt or damaged tools
- mark the center of the hole to be drilled then center pilot pin to locate the hole center
- check if the coolant valve is opened and then depress cutter to show flow of the coolant that increases the cutter life enormously
- maintain a firm and steady feed rate (not too slow) to extend the life of the cutter even more
- pay attention that at the end of the cut the slug will be ejected with force and distance, that may hit someone around
- after drilling the first hole, make sure that the hole diameter conforms to the marking on the annular cutter.
- use recommended work parameters (spindle speed and feed rate) depending on the cutter diameter and workpiece hardness.

Core drills grinding machine SM-101

Annular cutter regrinding machine SM-101 saves time and money in carrying out an effective HSS core drills re-sharpening, particularly if the customer is in urgent need for continued production drilling. Thanks to its solid construction, low power consumption, small dimensions, the machine can be used in any place and needs short time to be installed.

Features and benefits:

- simple set up operation - easy positioning of cutting tool
- economical - far less expensive than heavier equipment
- lightweight and portable - ideal for site work, or a small workshop
- diamond wheel - creates a sharp, clean new cutting edge
- easy angle adjustment - simple alignment to original angle geometry

PRO-200A ATEX | PNEUMATIC DRILLING MACHINE

Heavy-duty pneumatic drilling machine with milling/cutting capacity up to 200 mm diameter and tapping capacity up to M48 is extremely useful for very special applications on construction sites and industrial installations, where electric appliances are prohibited for safety reasons.

Two permanent magnetic bases, pneumatic motor and no. 5 Morse Taper spindle make this machine one of the most powerful portable magnetic drills on the market.

PRO-200A ATEX is perfectly suited to hazardous environments such as oil drilling platforms, petrochemical plants, oil refineries, shipbuilding and petrochemical industry

PRO-200A ATEX conforms to II 2G Ex h IIC 135°C (T4) Gb and II 2D Ex h IIIB T135°C Db requirements for equipment used in hazardous environments

Features and benefits:

- pneumatic motor and permanent magnetic bases eliminate the need of electric power supply
- intended for use in potentially explosive atmospheres
- heavy-duty pneumatic motor
- strong permanent magnets
- ATEX certified drill
- protection against accidental motor activation
- self-locking devices prevent any incidental deactivation of the permanent magnets
- cross slide system for precise hole center locations

A potentially explosive atmosphere exists when a mixture of air gases, vapours, mists, or dusts combine in a way that can ignite under certain operating conditions. The source of ignition could be either electrical or mechanical in origin.

Working in explosive atmospheres carries many challenges, including first of all the safety of the workers. Therefore, PRO-200A ATEX complies with ATEX (ATmospheres EXplosibles) directive and is intended for use in the oil, gas and energy industries.

PRO-200A ATEX capacity:

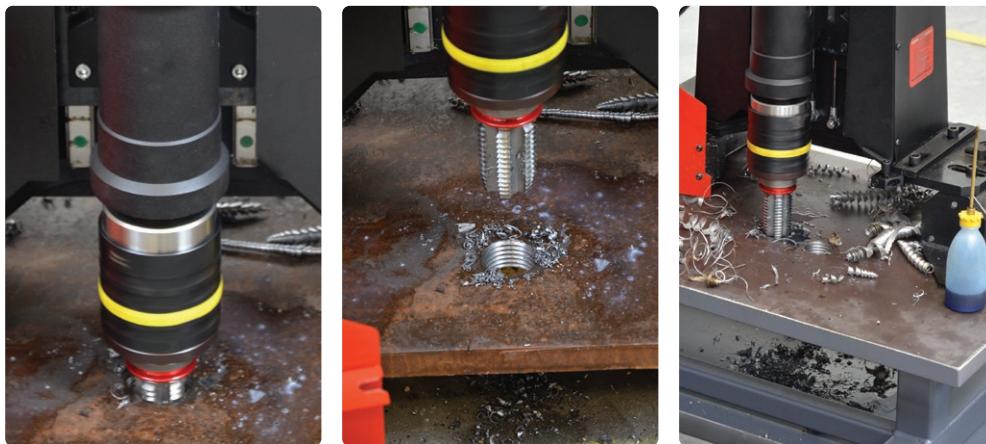

Milling up to 200 mm (7-7/8")

Drilling up to 45 mm (1-3/4")

 Tapping up to M48

 Working on contour surfaces

PRO-200A ATEX can be fixed to pipes of min. 950mm (37.4") diameters

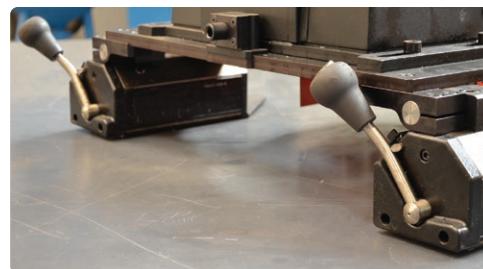

Base with permanent magnets can be adapted to a workpiece curvature

 Safety features:

No accidental motor activation possible.

Operator must simultaneously press the button at the base of the lever and turn the valve lever until it stops, to enable motor start-up.

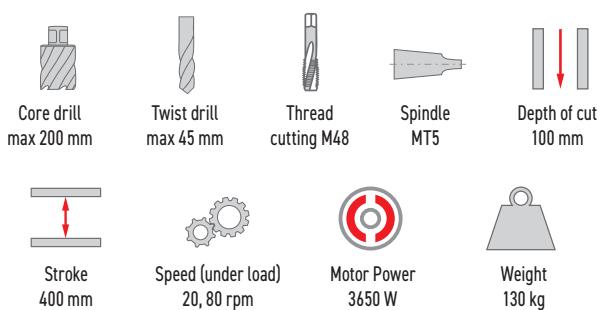

Permanent magnets need no power supply from the mains. A self-locking device prevents any possible accidental movement of the handle and deactivation of the magnet.

ATTENTION: Cutter guard is not in place for demo purpose only
